Security Auditing (Lawson S3 and Landmark)
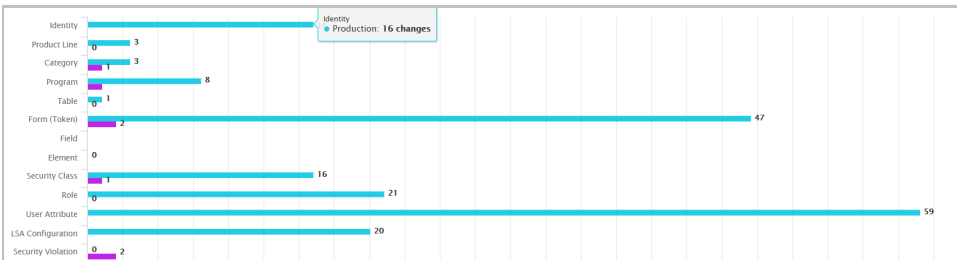

Audit Any Change to Your Lawson Security Model

In the Cloud or On-premise

Flexible and Easy to Implement

Kinsey's Security Audit Reporting provides additional insight into your Infor-Lawson S3 and Landmark environments. By providing detailed queries of security changes you can track sensitive updates to Users and security objects. The queries include the before and after values of all changes, the date of the change and the security administrator who made the entry. The added ability to save reports and schedule email notifications allows you to easily monitor critical changes to the security model.
